Practical - 15: Exploring DOM Methods and Dynamic HTML (DHTML)

1) WAP to demonstrate the use of getElementById() method. (A)

Program :-

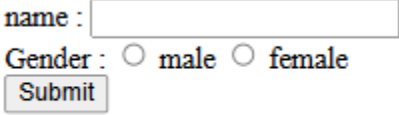

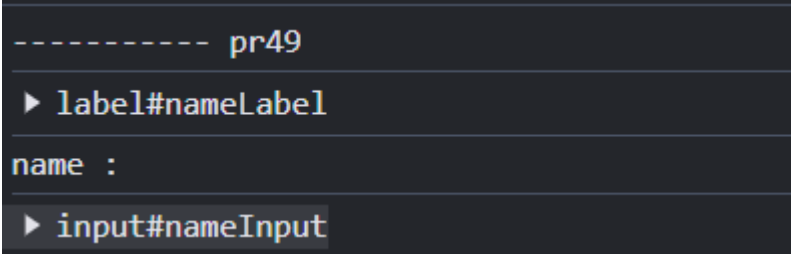

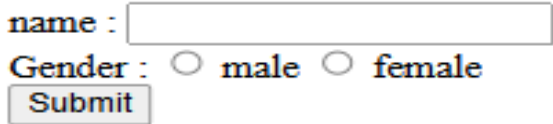

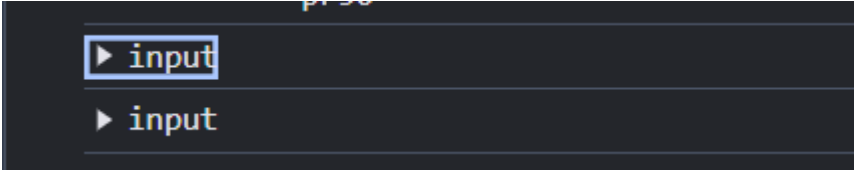

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="UTF-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <style>
    #greeting,#showDate{
      font-size: 24px;
      color: blue;
      text-align: center;
      margin-top: 50px;
      transition: 0.5s ease-in-out;
    }
    #changeBtn,#showDateBtn {
      display: block;
      margin: 20px auto;
      padding: 10px 20px;
      font-size: 16px;
      cursor: pointer;
    }
  </style>
</head>
<body>
  <form onsubmit="onSubmit(event)">
    <label id="nameLabel" name="name">name : </label>
    <input id="nameInput" name="name" type="text" /><br>
    <label>Gender : </label>
    <input type="radio" name="gender" value="male"> male
    <input type="radio" name="gender" value="female"> female<br>
    <input type="submit" >
  </form>
  <h1 id="show"></h1><br><br><br>
  <h1 style="text-align: center;">Welcome to DHTML Example</h1>
  <div id="greeting">Hello! Click the button to change me.</div>
  <button id="changeBtn" onclick="animat()">Change Style and Text</button>
  <h1 id="showDate"></h1><br><br><br>
  <button id="showDateBtn" type="button" onclick="showdate()">show Date</button>
  <script src="script.js"></script>
</body>
</html>
```

Script.js

```
const label = document.getElementById("nameLabel")
console.dir(label);
console.log(label.innerHTML);
const input = document.getElementById("nameInput")
```

Faculty: Prof. Chirag K. Sakhrani

	<code>console.dir(input);</code>
	<p>Output :-</p>  
2)	WAP to demonstrate the use of <code>getElementsByName()</code> method. (A)
	<p>Program :- *Use HTML code from question 1</p> <pre>Script.js const genders = document.getElementsByName("gender") genders.forEach(elem=>{ console.dir(elem); })</pre>
	<p>Output :-</p>  
3)	WAP to demonstrate the use of <code>getElementsByTagName()</code> method. (A)
	Program:-
	*Use HTML code from question 1

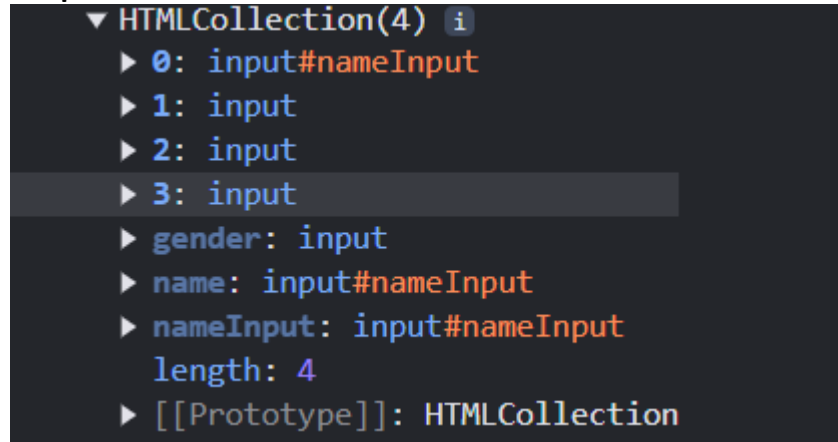

Subject : 2304CS431 – Client Side Scripting using Javascript

Faculty: Prof. Chirag K. Sakhrani

```
const inputTag = document.getElementsByTagName("input")
console.log(inputTag);
```

Output:-

4) WAP to show how to use DHTML. (A).

Program:-

***Use HTML code from question 1**

```
const geeting = document.getElementById("greeting")
const btn = document.getElementById("changeBtn")
function animat(){
    geeting.style.color = "green"
    geeting.style.fontSize = "30px"
    geeting.style.transform = "rotate(360deg)"
}
```

Output:-

Welcome to DHTML Example

Hello! Click the button to change me.

Change Style and Text

Welcome to DHTML Example

Hello! Click the button to change me.

Change Style and Text
